

How to start a match

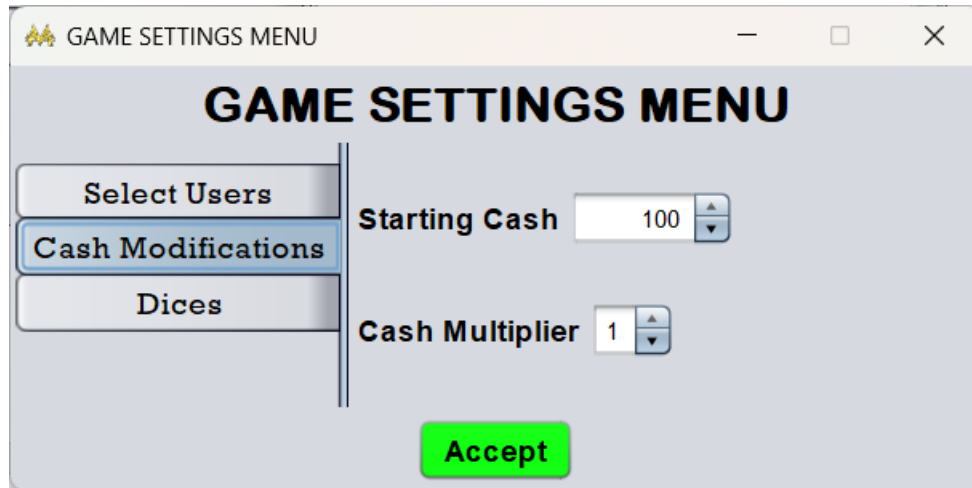

You will have noticed that in case you attempt to hit the play button immediately, a message will pop up asking for the users that are to play. This is because first you need to configure the match before it starts. You can do this clicking the button **Game Settings**

Then a new window will emerge, here you should be able to customize the match. In order to begin a match as soon as possible, you need to select at least 2 users in the user list provided in the window, to do this press Ctrl while you select and there is a maximum of 4 users.

As soon as you select the players, you should be able to start the match directly, however should you like to custom a couple of specific parameters in the game you can switch to the Cash Modifications window where you can select the cash multiplier and the starting cash

The dices are not currently available for it is still a work in progress.

Once you have selected the specifications you can hit Accept and then the Play button should be available. Remember that the game is by turns, if you would like to learn how to play you can check out the Rules tab to take a closer look of the game itself
