# INTERFACE GUIDE

Welcome to the interface guide of the **MONOPOLY GAME**!!!

In this guide you will learn the way we have structured our whole interface and show you how to use it properly as you begin your journey through the game.

Here you have a picture where you can see the main menu of the game, it is the first window you will find as you enter.

Here is a basic tutorial for the buttons:

- **Play:** You can start a match from this button, however not might not be available if you haven't set the match settings first.
- **Game Settings:** This button can help you manage the way your next match is going to be working. Here you can set the rules of the match (to see more check the tab *Rules*) and several specifications of your next match, like the number of players and many other options.

- **Users Achievements:** This is where every user can check out their profile and see what they have achieved throughout their journey in the game.
- **Match Record:** Is a place where every match from every user is recorded, thus enabling the users to check out their performance in any match they have played with some statistics that might be of some use.
- **Manage Users:** Here every user can manage their profile, by logging in, signing in and managing the features of their account.
- **Help:** This is the window you are watching right now. It is supposed to give you a basic tour through the interface and assist you with other common issues.
- **Credits:** Here you can check all the references to the creators and credits to all sources that made this project possible 😊
- **Leave Game:** Exits the game, however you can also use the X button at the top of the screen.
